SUMMARY

Product Designer who works end-to-end, from figuring out what users actually need to shipping a design that holds up in development. At Neuronest, I owned the full design process for two SaaS products, made decisions based on research rather than assumptions, and built interfaces that were easier to scale as the product grew.

EXPERIENCE

Neuronest AI Pvt Ltd

Product Designer

Jun 2025 – Dec 2025

Coimbatore, India

Diginest 2.0 - WhatsApp Business Management SaaS

- Took complete ownership of redesigning a 14-module SaaS platform, starting from a full UX audit to understand where users were getting stuck, then rebuilding flows based on what the research showed.
- Ran usability sessions with 10+ users, mapped their behavior, and used those findings to simplify the most friction-heavy parts of the product. When testing on the Meta Ads module revealed the initial design was based on a wrong assumption, I redesigned it based on what users actually needed.
- Built a design system with 50+ components on an 8px grid, Light and Dark modes, and WCAG AA accessibility so the dev team had one reliable source to build from, cutting inconsistencies and speeding up development.
- Results: SUS score 78.5, 89% task success rate, 30 to 40% faster task completion.

JuristBot AI - Legal Tech SaaS Platform

- Only designer on a 3-week sprint covering everything: research, information architecture, wireframes, high-fidelity UI, and developer handoff.
- Spent time with stakeholders understanding how legal workflows actually work before touching any designs. The goal was to make complex legal processes feel simple without removing what mattered.
- Found that users were spending up to 30 seconds just trying to find key features. Reorganized the navigation and structure from scratch and brought that down to 3 seconds, same functionality, much less friction.
- Rebuilt the onboarding flow with progressive disclosure so first-time users were not overwhelmed by a tool built for legal professionals.
- Results: UX score 8.6/10, ease-of-use 8.3/10, 100% task success rate on all critical flows.

PROJECTS

[View All](#)

BrandOS - AI-Powered Branding Platform | Figma, Miro

Feb - Mar 2026

- Noticed that the real problem in branding tools is not creating assets, it is not knowing which direction to go. Reframed the product around helping users make confident decisions rather than just generating output.
- Designed three connected features: Brand Memory, Smart Review, and Direction Fit. Together they give users context, surface past decisions, and validate choices against their brand goals so every step feels intentional.

TripGenie - AI-Powered Travel Planning App | Figma, Miro

2024

- Started with research and found four pain points travelers actually face: staying within budget, the time it takes to plan, getting generic suggestions, and coordinating with a group. Every design decision came from one of those four findings.
- Led the full UX side including research, personas, wireflows, and information architecture. Designed AI trip suggestions, a shared group itinerary, and a real-time budget tracker. Tested with 12 users: 92% finished key tasks on their own, 85% said the interface felt smooth, and the app scored 87 out of 100.

SKILLS

UX Research: User Research, User Interviews, Usability Testing, UX Audits, Journey Mapping

Design: Wireframing, Prototyping, Interaction Design, Information Architecture, Design Systems

Tools: Figma, Miro, Adobe Photoshop, Canva, Hotjar, Maze, UserBrain

Technical: ReactJS, Git

Core Strengths: Problem Solving, Analytical Thinking, Product Thinking, Decision-Making Design

EDUCATION

K.S.R Institute For Engineering And Technology

B.Tech – Information Technology

Aug 2021 – Apr 2025

CGPA: 7.52 / 10
